Cycloid 600 speed reducers

Compact high efficiency cycloidal speed reducers

“Solutions, not just products.”

Specialists in Electric Motors, Geared Motors & AC Drives

At CMG we offer customised packages to the most demanding industrial markets. Our success is built on a strong commitment to our customers’ needs and a willingness to find the best solution possible. We have been in business since 1948 so you can be confident our expertise and experience is second to none.

With over 500 staff around the globe, our branches extend across Australia, New Zealand, Asia Pacific, South Africa, Europe and the Middle East.

We have the capability to value-add our products through partnerships with leading international companies whose technical skills are equal to ours, including Gear Motors from NORD and AC Drives from VACON. In return we offer these companies superior technical support that complements their own R&D capabilities.

Our manufacturing facility in Melbourne, Australia, demonstrates our commitment to efficient automated manufacturing processes. This facility includes a NATA accredited laboratory which offers complete design and testing services.

“We specialise in an extensive range of Electric Motors, Geared Motors and AC Drives. Offering a “complete package” ensures our customers get the most efficient, cost effective solution possible.”

CMG Cycloid 600 series, compact high efficiency cycloidal speed reducers, 0.37 to 22kW, up to 3890Nm

This is the CMG short form catalogue for the CMG range of Cycloid 600 compact high efficiency cycloidal speed reducers.

Cycloid 600 series reducers

CMG Cycloid 600 reducers in this catalogue are solid shaft. Gearcases are precision machined in one process.

The cycloidal discs are made from high quality bearing steel, and are precision machined to ultra fine tolerances to provide a smooth rolling action.

Bearings are adequately selected and proportioned assuring maximum life. For size 610 to 612 the cycloidal discs and bearings operate in a grease packed system. For sizes 613 to 618 the cycloidal discs and bearings operate in an oil bath. The tolerances between shaft and bores as well as keys and keyways are selected to ensure proper fit.

This catalogue details CMG's range of Standard foot, flange and face mount Cycloid 600 series reducers. Special mountings are available on request.

HGA motor - MEPS2 compliant (Eff 1)

The CMG enhanced performance HGA range of motors are recognized for their inherent suitability for all geared motor applications. Motors are designed in accordance with MEPS AS/NZS 1359.5.2004 for minimum efficiency motors, equivalent to European Eff 1.

Standard motors are 3 phase, 415 volt, 50 Hz. Motors are manufactured with 'F' class insulation, with windings designed to limit the temperature rise to 80K. The HGA motor has an all cast iron construction, and provides a protection rating of IP55 for both motor and terminal box.

Motors in this catalogue have the same performance and dimensions as standard HGA B5 or B14 flange mount motors but are provided with a reduced output shaft to suit the gearbox input. Models listed are 4 pole (1500 r/pm) with other motor speeds available upon request.

Service factors

Where the required service factor is not known it can be calculated using the following table.

Hours per day	Uniform	Moderate	Heavy
0-3 hours	0.80	1.00	1.35
4-10 hours	1.00	1.20	1.50
11-24 hours	1.20	1.35	1.60

Principle of operation

The cycloidal design has three major components:

- 1) Input shaft assembly (high speed) with eccentric cam, roller bearings and seals
- 2) Cycloidal discs
- 3) Output shaft assembly (slow speed) with support bearings and seals.

Torque transmitted to the high speed shaft rotates the eccentric cam and roller bearing assembly, and rolls the cycloidal discs around the internal circumference of the stationary ring gear housing.

The teeth of the cycloidal discs contact the pins of the stationary ring gear, producing a reverse rotation at a reduced speed. Each rotation of the high speed shaft advances the cycloidal discs a distance of one tooth pitch in the opposite direction.

The reduced rotation of the cycloidal discs is transmitted to the output shaft assembly by means of drive pins and rollers, that are projected through holes located around the bore of the cycloidal discs.

Product code specification

When placing an order the product code should be specified. The product code of the Cycloid 600 is composed in accordance with the following example:

T	R	C	6	1	3	0	2	1	1	1	R	S
1-3			4-6			7-9			10-11	12	13	

Positions 1 to 3

TRC = CMG Cycloid 600 cycloidal speed reducer

Positions 4 to 6

Gearbox model

611, 612, 613, 614, 615, 616, 617 or 618

Positions 7 to 9

Gearbox ratio

Padded to 3 digits

Positions 10 and 11

Gearbox motor input

00 = Reducer

For geared motor units standard motor frame sizes apply:

07 = 71 **80** = 80 **09** = 90 **10** = 100
11 = 112 **13** = 132 **16** = 160 **18** = 180

Position 12

Input shaft

R = Reduced motor shaft input

X = IEC hollow input

C = IEC solid input

Position 13

Mounting arrangement

S = Standard foot mount

V = V Type output flange

F = F Type output flange

Product advantages

By replacing more conventional helical, worm and spur gear units throughout the world, the Cycloid 600 series high-efficiency speed reducer has proven itself in a wide variety of applications.

High efficiency

The superior cycloidal design over conventional gear tooth design, with all torque transmitting parts operating in compression, allows for many teeth to share the load. Cycloidal teeth transmit torque by rolling from one element to another. There is no sliding friction as in conventional gear reducers. This design eliminates sliding friction and creates a vibration-free operation. High efficiencies are reached in excess of 90% in single stage reduction units and 80% plus in double stage reduction units. CMG Cycloid 600 series speed reducers can make your individual applications more productive and efficient.

Overload protection

The Cycloid 600 cycloidal tooth design maximizes 67% tooth contact. The load sharing capabilities eliminates gears teeth being sheared off and provides an overload protection of 500% (gearbox only).

Warranty

Exceptionally versatile engineering and manufacturing capabilities enable us to offer Cycloid 600 speed reducers for virtually any industrial application. Every Cycloid 600 speed reducer comes with 12 months warranty as standard. Proper selection and correct maintenance will provide the end-user with unequalled service life for many years.

Extensive range

CMG provides a range of speed reducers in combinations of sizes, ratios, input powers, mountings and configurations. High reduction ratios 6:1 through 119:1 per single stage, through 7569:1 double and almost up to 1,000,000:1 triple reductions. Input kilowatt from 0.18 to over 150kW, output torque exceeds 60,000Nm

A wide variety of horizontal and vertical mounts with various IEC input adaptors for maximum ease of installation are available. Cycloid housings are manufactured from ductile iron for ultimate durability. The power transmitting internals are manufactured from bearing steel 52100 series, through hardened and tempered to Rockwell Rc. 59-62.

These manufacturing features have produced a very compact reducer compared to conventional helical reducers for similar applications. Since we can now provide a smaller compact reducer, with high efficiency, this allows us to use a smaller size motor to provide the same output torque rating as previously required. We have this compact motor designed for integral coupling with the Cycloid 600 series.

General information

Shaft rotation

For single and triple reduction units, the low speed shaft turns in the opposite direction to the high speed shaft. For double reduction drives, the low speed and high speed shafts turn in the same direction.

Note: On all Cycloid 600 series speed reducers, the high speed and low speed shafts have the same common axis.

Motor input speeds (nominal)

1500 r/min (4 pole)

1000 r/min (6 pole)

750 r/min (8 pole)

Note: For non-standard input speed, please contact your CMG representative to confirm torque ratings.

Shaft connections

Proper mounting of sleeves, gears, pulleys, chain sprockets, belt and couplings is essential for trouble free operation. All shaft connections must be mounted as close as possible to the cycloidal housing, but never touching. Overhung loads should be located as close to the bearing as possible. If shaft connections are mounted at the end of the shaft, the overhung load may cause excessive loading on the bearings and possible shaft deflection. Radial loads have been designed at the midpoint of the slow speed shaft. If this is not possible, please contact your CMG representative to confirm proper selection. Proper alignment procedures for all shaft connections are imperative for trouble free operation.

Permissible torsional forces such as thrust and radial loads applied to the low speed shaft must be calculated to confirm their allowable limits for each selection.

Reducer selection process

Follow the steps below when selecting a reducer. Two examples are given to provide a better understanding. Consult CMG for further assistance with selecting the right reducer, or understanding the selection process. Service Factor tables can all be found on the next page.

Model selection

Value	Step	Example 1	Example 2
	(a) Reducer Input Speed [r/min]	1,200	600 r/min
	(b) Reducer Output Speed [r/min]	28	20 r/min
	(c) Reducer ratio = (a) / (b)	43:1	30:1
	(d) Load type (Uniform, Moderate, Heavy)	Moderate	Moderate
	(e) Running cycle [hours/day]	10 hrs/day	24 hrs/day
	(f) Service factor. Use (d) and (e) on Table A.	1.2	1.35
	(g) Maximum driven torque [Nm]	3,100 Nm	2,000 Nm
	(h) Maximum reducer torque = (f) x (g) [Nm]	3,720 Nm	2,700 Nm
	(i) Reducer model In the Reducer selection tables (p14-16) 1. Use (c) to first select the nearest reducer ratio block. 2. Then use (a) to chose the nearest row. 3. Scan across the row to the column with the next highest torque above (h). 4. Scan up the column to identify which reducer model.	618	617

Overhung load check

When a gear, sprocket or other form of pulley is coupled to the reducer output shaft it is very important to make sure the applied overhung load is less than the maximum allowable load. Confirm the calculated overhung load on the output shaft is less than the maximum permissible overhung load with the following steps:

Value	Step	Example 2
	(j) Reducer maximum overhung load. Use (b) and (i) in Table B to identify.	26,281
	(k) Coupling factor. Select according to coupling type from Table C.	1
	(l) Shock factor. Select according to shock type from Table D.	1.2
	(m) Total shaft load factor = (k) x (l)	1.2
	(n) Maximum permissible overhung load = (j) / (m)	21,900
	(o) Pulley/Sprocket Pitch Circle Radius (PCR)	0.15
	(p) Calculated overhung load = (h) / (o)	18,000
	(q) If (p) ≤ (n) then the reducer size (i) is still suitable.	OK

Example 1: Background

Driven machine: Mixer, moderate load, direct coupled, output shaft vertical down, V-flange mounting

Operation time: 10 hrs/day

Input speed: 1,200 r/min

Output speed: 28 r/min

Transmitted torque: Torque on the slow speed shaft (output) of the reducer is 3100 Nm.

Example 2: Background

Driven machine: Chain conveyor, moderate load (variable feed), horizontal foot mounted, sprocket fitted to output shaft is pitch circle radius $R = 0.15$ m, Radial load position: center of slow speed shaft, light shock load.

Operation time: 24 hrs/day

Input speed: 600 r/min,

Output speed: 20 r/min

Transmitted torque: Torque on the slow speed shaft (output) of the reducer is 2000 Nm.

Service factor tables

Table A: Service factor

Hours per day	Uniform	Moderate	Heavy
0-3 hours	0.80	1.00	1.35
4-10 hours	1.00	1.20	1.50
11-24 hours	1.20	1.35	1.60

Table B: Reducer maximum overhung load

Lubrication and maintenance

Sizes 610 to 612

Size 610 to 612 Cycloid 600 units are factory packed and ready for operation. These units are filled with specially designated long life grease to ensure maintenance free operation. Replenishment after every 20,000 hours is recommended for longer service life.

Recommended grease type is Shell Alvania Grease RA or equivalent which has an ambient operating temperature range of -15 to + 50 °C.

Grease weights

Reducer model	Weight [g]	
	Speed reduction mechanism	Slow speed shaft bearings
610	96.39	113.40
611	246.65	144.59
612	246.65	144.59

Sizes 613 to 618

Oil change interval

Under all conditions every Cycloid 600 unit needs an initial oil change after 500 hours of operation. The subsequent oil change interval will depend on the operating conditions described in the table below:

Operating condition	Oil change interval
Less than 10 hours / day operation	Every 6 months
10 - 24 hours / day operation	Every 2500 hours
Heavy operation conditions - such as high ambient temperature & high humidities	Every 1-3 months

Oil volumes

Reducer model	Lubricant type		Volume [l]	
	Horizontal mounting	Vertical mounting	Horizontal mounting	Vertical mounting
613	Oil - Bath	Oil - Bath	0.76	1.14
614	Oil - Bath	Oil - Bath	0.76	1.14
615	Oil - Bath	Oil - Bath	0.76	1.14
616	Oil - Bath	Forced*	1.52	1.14
617	Oil - Bath	Forced*	1.89	1.89
618	Oil - Bath	Forced*	2.27	1.89

* Must have forced lube via Internal plunger lubrication pump.

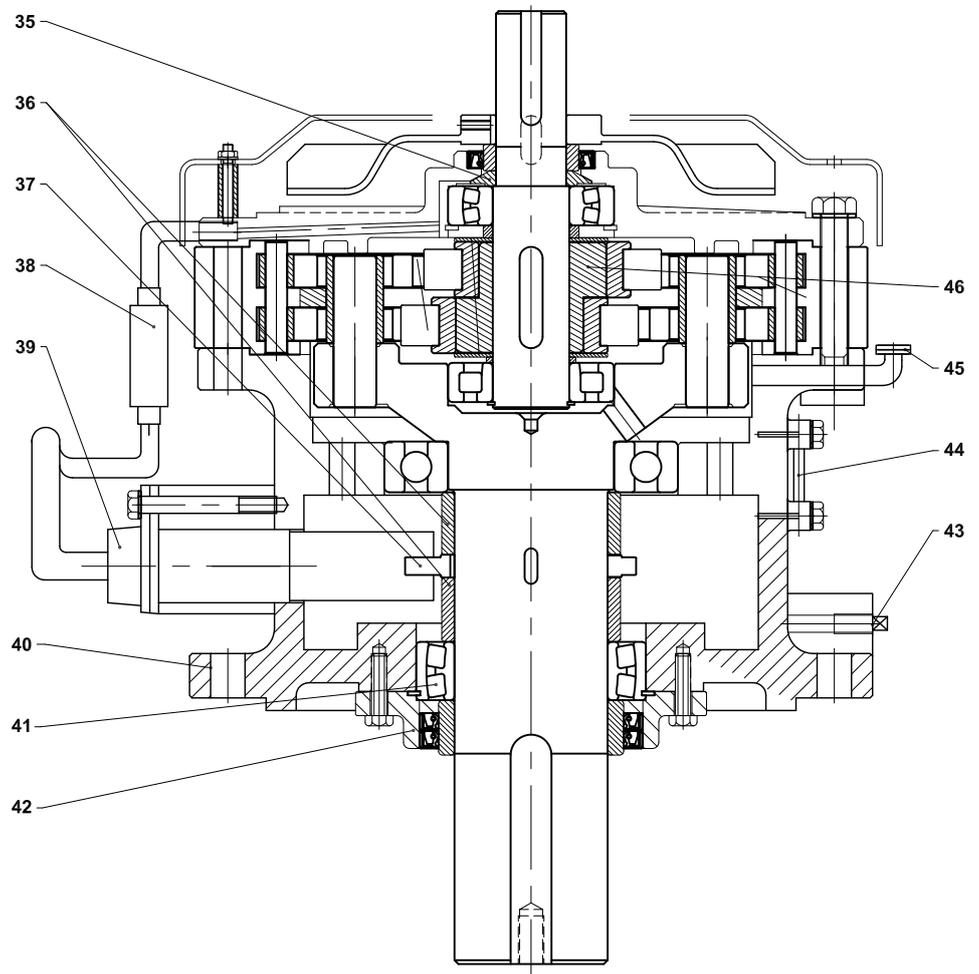

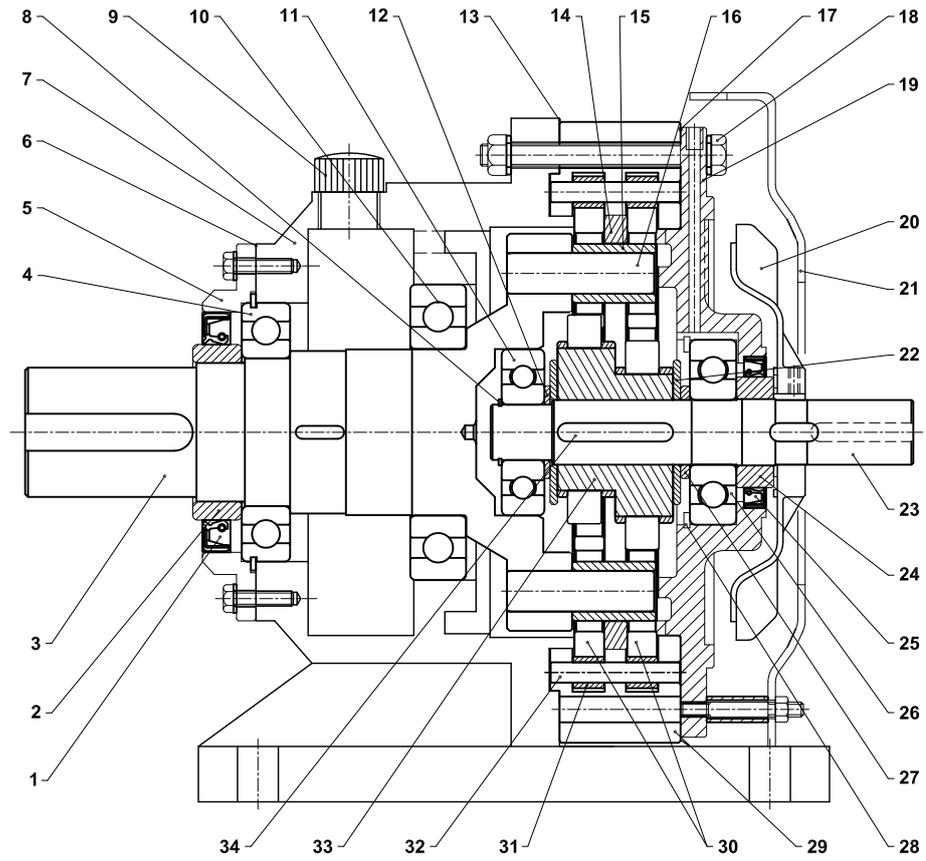

Recommended oil grades

Use only quality brand oils. Inferior quality oils will reduce the life of your reducer.

Ambient operating temperature range [°C]	Recommended oil grade
-15 to + 5	ISO VG 68
0 to + 35	ISO VG 100-150
+ 30 to + 50	ISO VG 200-460

Parts lists

Item	Description
1	Oil seal
2	Collar (low speed shaft)
3	Slow speed shaft
4	Bearing A (low speed shaft)
5	Slow speed end cap
6	Gasket A*
7	Horizontal casing
8	Retaining ring
9	Oil filter plug
10	Bearing B (low speed shaft)
11	Bearing A (high speed shaft)
12	Spacer
13	Gasket B*
14	Spacer ring
15	Slow speed shaft roller
16	Slow speed shaft pin
17	Gasket C*
18	Bolt for ring gear housing
19	High speed end shield
20	Cooling fan
21	Fan cover
22	Spacer
23	High speed shaft
24	Collar (high speed shaft)
25	Oil seal
26	Bearing B (high speed shaft)
27	Circlip
28	Retaining ring
29	Ring gear housing
30	Cycloid disc
31	Ring gear roller
32	Ring gear pin
33	Eccentric assembly
34	Key
35	Oil slinger
36	Spacer
37	Cam
38	Oil sight glass
39	Plunger pump
40	Flanged casing
41	Angular contact bearing
42	Slow speed end cap
43	Plug (oil drain)
44	Oil level gauge
45	Oil filter plug
46	Eccentric assembly

Need an extra product to complete your project?

Truly a one stop destination, at CMG we offer a comprehensive range of products, including associated accessories, for a wide range of industries.

Ask us about our speciality products:

- ▶ Electric Motors
- ▶ Gear Motors
- ▶ AC Drives
- ▶ Softstarters

PLUS we stock and supply many associated products.

Contact us NOW for a product catalogue.

Electric Motors

- HGA series** Enhanced performance cast iron units MEPS2 (Eff 1) compliant
- SGA series** Enhanced performance cast iron units
- HLA series** Cast aluminium multi-mount units MEPS2 (Eff 1) compliant
- SLA series** Cast aluminium multi-mount units
- PPA series** High specification cast iron units
- PPD series** Zone 1 Exd cast iron units
- MT series** Cast aluminium single & three phase units
- CT series** Air movement, pumping & general purpose application motors
- CW series** Australian made, special application & general purpose motors

AC Drives & Softstarters

- Vacon NX** Vacon frequency converters
- Lovato ADX** Softstarters with torque control

Gear Motors

- Nordbloc-SGA** Euro dimension inline units
- Nordunicase-HGA** Heavy duty inline and flat helical units
- Nordbevel-SGA** Heavy duty helical bevel units
- Nordworm-HGA** All cast iron motor & wormbox units
- FRT-MTT/HLA** All aluminium universal mount wormbox units
- FRS-HGA** All cast iron motor & wormbox units
- FRS-MTT/HLA** All aluminium motor & wormbox units
- FRD-MTT/HLA** All aluminium Euro dimension inline units
- C&H SLA** High ratio inline multi-stage spur units
- Cycloid 600** Compact High Efficiency Cycloidal speed reducers
- Geardrive** C-frame sub-fractional horsepower units
- SMR®** Helical shaft mounted reducers
